RETURN TO PRACTICE (RTP) GUIDE

Criteria for Supervised Practice and Case History Write-Up

Context

Ability to evaluate complex problems set in clinical environments, and the ability to rationalize case management taking into account a range of factors and values using an evidenced based approach to demonstrate competent, lawful, safe and effective autonomous practise.

Learning outcomes

1. Effectively conduct a series of 'live' nutritional therapy consultations, both initial and follow-up.
2. Critically analyse case history in response to the dynamic of the therapeutic encounter, antecedence, mediators and triggers, timeline, dietary analysis, test results, and ability of the client to engage with recommendations.
3. Critically evaluate case management and protocol (therapeutic relationship, diet, and nutraceuticals) within a Functional Medicine framework utilizing an evidence based approach. [Click here](#) to access information on Core Text Books.
4. Evaluate outcomes of nutritional therapy, using an evidence informed approach, to formulate future plans and actions making appropriate adjustments to meet any changing needs while managing potential dissonance between expected and actual protocol outcomes for self and client.
5. Critically reflect on own interactions with clients, supervisors and other healthcare professionals using clinical performance feedback to consolidate clinical judgement and performance.
6. Demonstrate professional and ethical working in relation to clients, supervisors, other care providers and others.

Notes

- The above table was constructed using current practice on 'currency' of knowledge, understanding and skills and alignment with the Grandparenting Routes (now known as Portfolio Routes).
- The Learning Outcomes articulate the level required for evidence informed, safe and effective practise.
